

Later Dating Pregnancy Scans

To include photographs and computerised report

Overview of a Later Dating Pregnancy Scan

12 to 17 weeks

The later dating pregnancy scan is performed to:

- verify the baby's heartbeat
- calculate the gestational age and determine estimated date of delivery
- look for multiples (twins, triplets etc)
- determine that the baby is located normally within the womb and that the pregnancy is progressing normally at this stage
- examine placental site
